

Design Principles Website

Cody Oleksak, Sophia Da Silva , Brandon Perez , Ragde Primero , Richard Rangala

Web & Mobile II (ISTE.240.02, 2241), Group 3

Nick Snyder

September 30, 2024

2) Introduction / Overview

- The goal of this project is to demonstrate our proficiency in web design, planning, and documentation as a team, working together to create a website that discusses the 4 main design principles: CRAP (contrast, repetition, alignment, proximity).

3) Site Goals

- I. Properly describe and show the usage of each CRAP design principle
- II. Include content for demonstrations/examples, tutorials, and quizzes/surveys.
 - A. This may include images, animations, interactions, forms, and so on.
- III. Ensure the website remains accessible (WCAG contrast, HTML/CSS validates, etc.)

4) Audience Definitions

- I. Professor of Web & Mobile computing

Max Anderson
Professor

Bio

Max Anderson is a passionate professor of Web Development dedicated to teaching students the essential CRAP principles—Contrast, Repetition, Alignment, and Proximity. He believes these foundational design concepts are crucial for creating effective and engaging web interfaces. To enhance his teaching, Max is actively seeking a website that provides practical, hands-on experiences.

Behaviours

Max Anderson engages his students by creating an interactive learning environment that encourages participation. He focuses on hands-on projects, allowing students to apply the CRAP principles in real-world situations. Max shares useful online resources and provides constructive feedback to help students improve their designs. Committed to staying current with web development trends, he incorporates new ideas into his teaching. As a mentor, he guides students in their career paths and promotes teamwork through group projects. Additionally, Max adapts his teaching methods based on student feedback to meet their diverse learning needs.

Personality

Introvert	Extrovert
Thinking	Feeling
Order	Freedom

Skills

HTML/CSS	
JavaScript	
UI/UX Design	

Goals

- Provide resources and activities that help students grasp and apply the CRAP principles in their web design projects.
- Offer tools and tutorials that encourage students to think creatively and experiment with their designs.
- Inspire students to explore additional resources and continue learning beyond the classroom setting.

Age: 27
Location: Los Angeles, CA

Friendly Professional
Thinker Motivated

II. Front-end developer

John Smith
Developer

Age: 32
Location: Chicago, Illinois

Curious Visual Learner

Analytical Problem Solver

Bio

John Smith is a seasoned developer looking to enhance the visual and usability aspects of his work. Though his technical skills are strong, Alex finds that his projects sometimes fall short when it comes to delivering clear, intuitive user experiences. He's discovered the CRAP principles and wants to use them to elevate his designs. Alex is committed to learning how to apply these principles across various projects to improve both the visual appeal and the functionality of his work.

Behaviours

John Smith frequently seeks out resources to improve the user experience (UX) in his projects but often prioritizes functionality over design. He is becoming increasingly aware of the importance of structured layouts and cohesive design in making his work more engaging. John enjoys hands-on learning and prefers real-world examples where he can experiment with design tweaks progressively. He values feedback from clients and users, using it to refine both design and functionality in his projects.

Personality

Introvert Extrovert

Thinking Feeling

Order Freedom

Skills

HTML/CSS

JavaScript

UI/UX Design

Goals

- To apply the CRAP principles effectively to his projects, ensuring they are both functional and visually engaging.
- To create cohesive and user-friendly designs, whether for client work, personal projects, or internal tools.
- To better understand the relationship between design and development and how good design can enhance user experience.

III. A student learning about principles of design

Emma Thompson
Student

Age: 20
Location: Phoenix, Arizona

Inquisitive Reflective

Adaptable Innovative

Bio

Emma Thompson is an enthusiastic web development student who is searching for a website that can aid her in learning the CRAP principles. While she has a solid foundation in coding, she often feels that her projects lack the visual coherence and usability that effective design principles provide. Eager to improve her skills, Emma sees mastering the CRAP principles as essential for creating websites that effectively engage users. She is determined to integrate these principles into her work to ensure her projects are both functional and aesthetically pleasing.

Behaviours

Emma immerses herself in resources aimed at improving her understanding of web design and user experience (UX). She enjoys exploring a variety of online platforms, watching tutorials, and participating in design challenges to gain new insights. While her enthusiasm drives her, Emma occasionally struggles to see how design principles fit into the coding aspect of her projects. She thrives in practical settings, enjoying opportunities to apply what she learns, and actively seeks feedback from classmates and instructors to enhance her skills and projects.

Personality

Introvert Extrovert

Thinking Feeling

Order Freedom

Skills

HTML/CSS

JavaScript

UI/UX Design

Goals

- To gain a thorough understanding of the CRAP principles and apply them effectively to her web development projects, ensuring a balance of form and function.
- To develop a strong online portfolio that showcases her web projects, particularly highlighting the effective use of design principles.
- To build confidence in articulating her design choices and methodologies when presenting to peers and instructors.

Contrast - Desktop *(this is the page for the first CRAP design principle.)*

Order for every CRAP principle page goes as follows:

[Header/Nav](#) → [Definition](#) → [Examples](#) → [Interactive Demo](#) → [Quiz](#) → [Footer](#)

What is Contrast?

Contrast refers to the visual difference between two elements, such as color, size, shape, or texture. Designers use contrast to guide the user's eye, make important elements stand out, and create visual hierarchy.

Good vs. Bad Design Examples

Color Contrast:

Color contrast is the difference in brightness between foreground and background colors.

**Ut enim ad minim

ex ea commodo
consequat.**

Good Example of Color
Contrast

**Ut enim ad minim
veniam, quis nostrud
exercitation ullamco
laboris nisi ut aliquip ex
ea commodo
consequat.**

Bad Example of Color
Contrast

Size Contrast:

When combining shapes, each of a different size, we create size contrast and emphasize that the larger one is more important.

A gray rectangular box containing text. The title "This is a great Title" is in a medium-sized font, and the paragraph "Lorem ipsum odor amet, consectetur adipiscing elit." is in a slightly smaller font below it.

This is a great Title
Lorem ipsum odor
amet, consectetur
adipiscing elit.

Bad Example of Size

This is a great Title
Lorem ipsum odor amet,
consectetur adipiscing
elit.

Good Example of Size
Contrast

Font contrast:

Font contrast refers to the intentional use of varied sizes, weights, and colors within a text to create a visual hierarchy and enhance readability.

A black rectangular box containing text. The word "Make" is in a small, cursive script font, and the word "Contrast" is in a larger, bold, sans-serif font below it.

Make
Contrast

Bad Example of Font
Contrast

A black rectangular box containing text. The word "Make" is in a medium-sized, regular sans-serif font, and the word "Contrast" is in a larger, bold, sans-serif font below it.

Repetition - Desktop *(this is the page for the second CRAP design principle.)*

What is Repetition?

Repetition in design refers to the recurring use of visual elements to create consistency and familiarity. Repetition isn't just about copying elements—it's about maintaining harmony and guiding the viewer through a design.

Good vs. Bad Design Examples

Pattern:

Pattern in design is the repeated use of shapes, lines, or colors in a predictable way. It adds structure and visual interest to the design.

Good Example of a Pattern

Bad Example of a Pattern

Rhythm:

Rhythm is a combination of elements repeated, but with variations

Good Example of Rhythm

Bad Example of Rhythm

Consistency:

Consistency in design means using the same elements, like colors, fonts, or layouts, throughout a project to create a unified and professional look.

Alignment - Desktop *(this is the page for the third CRAP design principle.)*

What is Alignment?

Alignment is the placement of visual elements so they line up in a composition. In design, we use alignment to organize elements, to group elements, to create balance, to create structure, to create connections between elements, to create a sharp and clear outcome.

Good vs. Bad Design Examples

Grid Alignment:

Grid alignment refers to the arrangement of elements within a grid system.

Proximity Quiz

Question 1 of 10:

Is this a good example of Proximity?

- ☐ Yes
- ☐ No

Submit

Proximity - Mobile (this is the page for the fourth and final CRAP design principle.)

What is Proximity?

Proximity is a principle of design that refers to the spatial relationship between the elements of the design. The rules of proximity are pretty simple: things that are related should be nearer to each other, and things that are unrelated should be placed further from each other.

Good vs. Bad Design Examples

Organization:

Proximity helps organize a design by creating clear separation between different elements, making the layout easier to navigate and understand.

Good Example of Organization

Connection:

7) Requirements

A. Essential Requirements

- a. A home page, and one page for each design principle, explaining in thorough detail about what it is, how to apply it, and examples.

B. Desirable Requirements

- a. An animated and/or interactive demonstration of the design principle
- b. Quizzes and/or User experience survey
 - i. Store answers in a MySQL database on the server
 - ii. **EXTRA:** Demonstrate being able to modify database

C. Global/Accessibility Requirements

- a. Page validation
- b. CC on videos (if applicable)
- c. Colors meet WCAG (2.1 AAA) standards for contrast & readability
 - i. <https://color.adobe.com/create/color-contrast-analyzer>
- d. Optimize content (images, videos, etc.), including between desktop/mobile

D. Deployment Environment

- a. The Homepage should be index.html on the topmost folder, with subpages in a separate folder (for organization)
- b. Separate folders for extra assets (e.g. media, CSS/JS, etc.)

8) Conclusion - Discuss what we did to satisfy the needs of the user.

- Beginner-friendly website that shows definitions and examples for each CRAP principle.
- Provided interactive demonstrations and quizzes to give a more hands-on experience to the user and to test their understanding.
- Design accessibility for both mobile and desktop users.
- Ensure readability and maximize compatibility (e.g. through page validation)

9) Appendix - Any other data/diagrams we may have used to create this design doc.
